

# iOS UI MODULE DOCUMENTATION

DOCUMENT VERSION:	1.1
iOS SDK VERSION:	1.1.6
iOS BUNDLE VERSION	1.1.6
DATE REVISED	July 2022

## Installation

### Manual

Drag the Framework folder into your project.

### Cocoapods

CocoaPods is a dependency manager for Cocoa projects. For usage and installation instructions, visit their website. To integrate SpreoUIModule into your Xcode project using CocoaPods, specify it in your Podfile:

```
pod 'SpreoUIPod'
```

## Usage

### 1. Import IosUIModule

```
import IosUIModule
```

### 2. Use settings

2.1 The parameter can be changed to open search with a specific category on module start. Doesn't work if showClosestPoiDetails = YES and specific category empty or incorrect .

```
[SpreoUIModuleSettings sharedInstance].openSearchOnStart = true  
[SpreoUIModuleSettings sharedInstance].specificCategory = "Entrance"
```

2.2 The parameter can be used to present the closest poi from a specific category on start. Doesn't work if openSearchOnStart = YES and specific category empty or incorrect.

```
[SpreoUIModuleSettings sharedInstance].showClosestPoiDetails = true  
[SpreoUIModuleSettings sharedInstance].specificCategory = "Entrance"
```

### 3. Get the viewcontroller

```
let vc = IosUIModuleKit.initWithApiKey("YOUR_SPREO_API_KEY")
```

### 4. Present or push viewcontroller

```
navigationController?.pushViewController(vc, animated: true)  
present(vc, animated: true)
```

## Build requirements:

- Xcode Versions: Xcode 11.x
- iOS 11.0 SDK or later.
